What if

a compact system could be so intuitive that it can be operated without a manual?

a compact system could respond instantly between different modes?

a compact system could operate for an entire work day with only one battery charge?

a compact system could weigh as little as 5.4kg?

a compact system could detect ultra-slow velocity $< 2\text{cm/s}$ on tiny vessels, and also not miss the high velocity $> 40\text{m/s}$ on cardiac?

a compact system could image superficial tissues within 2mm and achieve more than 30cm of depth clearly on a 250 lbs difficult patient?

”

SonoBook™ 7 is the answer.
